Reviews

A must buy book if you need to adding benefit. I have read through and i also am certain that i will likely to read through once again yet again in the future. Its been designed in an exceedingly simple way and is particularly merely after i finished reading this publication by which really modified me, modify the way i think.

(Mrs. Jacquelyn Gutmann)

DISTRIBUTION AND ABUNDANCE OF INVASIVE NONINDIGENOUS PLANTS AND RARE PLANTS AT TWO RIVERINE NATIONAL PARKS IN THE GREAT LAKES NETWORK

Createspace. Paperback. Book Condition: New. This item is printed on demand. Paperback. 82 pages. Dimensions: 11.0in. x 8.5in. x 0.2in. Invasion by non-indigenous plants is widely considered to be a primary threat to species diversity and ecosystem function. Ecosystem changes resulting from these invasions may negatively impact native plant communities as a whole, as well as rare and endangered species. This report explores existing reports on rare plant locations in Mississippi National River and Recreation Area (MISS), and Saint Croix National Scenic Riverway (SACN). No rare plant surveys were performed for this study. In addition, we performed invasive plant surveys on several species considered target species of concern at each park. Common buckthorn (*Rhamnus cathartica* L.) was the most commonly found invasive species. Of the 68 plots sampled in MISS, 53 had at least one invasive species present, and of the 136 plots sampled in SACN, 128 had at least one invasive species present. While this was not an exhaustive attempt to survey all invasive infestations, this study can serve as a template for future surveys and to emphasize the importance of continuity to allow compilation and comparison of data across parks. This item ships from La Vergne, TN. Paperback.
